NextGen

An Innovative next step in workforce management **built by our customers, for our customers.**

OUR NEXT BIG THING IS Payentry Next Gen

Designed to help employers solve problems across human resources and payroll, NextGen provides a simple solution to the never-ending needs when it comes to managing employees.

Software challenges that make processing payroll a pain for today's employers —

1

Restricted access to the data you need to make decisions

Finding the information you need fast is difficult when it's buried so deep in the system that it requires a detective to find it.

2

3

Inability to handle complexities unique to each company

Truly simple solutions to paying employees are hard to come by. In many cases complex situations are compounded by payroll software.

Outdated, clunky systems

A lot of things have changed over the last 20 years, but has your workforce management software?

DATA AT YOUR FINGERTIPS

Keep track of payroll trends and quickly drill down to see specific payroll information

When an employee has a question about their paycheck, there's no need to dig around for the details, simply view the graph or click on View Details to see the specific information on the employee's account

Pairol Tren
